

CS110 · ACTION 6A · REQUIRED WORKSHEET

C# Code Map

Label what the tutorial code does before you change what it says.

OR Run the tutorial first.

Follow [Ready to Code Some C# NET](#) in Visual Studio. When the app runs, use this sheet to name the parts. Your final pathway app may replace or extend “Hello World.”

Selected context

Use your own story · Original Story Signal

02 Find the parts.

Visual Studio note: A newer Console App may use top-level statements, which means the compiler supplies the Program class and Main method. Label the parts you can see and write “compiler supplies it” for hidden parts.

```
using System; ← Library

class Program ← Class
{
    static void Main() ← Main method
    {
        Console.WriteLine("What is your name?"); ← Prompt
        string userName = Console.ReadLine(); ← Input + variable
        Console.WriteLine("Hello, " + userName); ← Output
    }
}
```

Library Class Main method Prompt Input + variable Output

03 Explain each label in your own words.

Class

A container that groups related code.

Program is the class that holds the code.

Main method

The method where the console program begins.

Main is where the program starts running.

Method / function

A named action. In C#, a function inside a class is called a method.

Console.WriteLine is a method that displays text.

Variable

A named place that remembers a value.

userName stores the name typed by user.

Console.WriteLine

Displays a line of text in the console.

The first WriteLine asks for the user's name, and the second displays Hello with the name.

Console.ReadLine

Waits for typed input and returns that text.

ReadLine receives the name typed by user

04 Trace the data.

INPUT

The user's name

VARIABLE

userName

OUTPUT

Hello, followed by user's name

o5 Plan your pathway version.

What will you replace or add after the tutorial app works?

I will ask the user to enter a signal message. The program will store it in a variable and display a response showing that the signal was recorded

Optional ways to go beyond the tutorial

- ☐ Another prompt
- ☐ A decision or conditional
- ☐ ASCII art in the console
- ☐ An image in README.md
- ☐ Another tested feature

o6 Save the evidence.

1. Complete every written section.
2. Select **Print or save PDF**, or take clear screenshots.
3. Place the PDF or screenshots in your GitHub Week6/evidence folder.
4. Commit and push the worksheet with your Action 6A project checkpoint.
